These sensors are extremely reliable even under the most extreme environmental conditions. Their extremely robust design meets the requirements for the IP68 and IP69K protection ratings.

protection ratings. Thanks to their excellent resistance to constant shocks and thermal shock resistance, they are the ideal choice for mobile applications, such road construction vehicles and agricultural machinery.

Mounting instructions

Mounting instructions/Description			
			There are two different mounting options. One option is to position the positioning element above the sensor housing. However, it can also be mounted so that the sensor housing completely encloses the positioning element.
2			LED function Operating voltage Green:Power on Displayed measuring range Green:Positioning element is in the detection range Green flashing:Positioning element is within the measuring range, low signal intensity (e.g. distance too large) Off:Positioning element is outside the detection range
			Inductive measuring principle provides more safety Due to the measuring principle, which is based on the functional principle of an RLC coupling, the sensor operates absolutely wear-free and is immune to magnetized ironware and other interferences. The amplitude of the signal can be changed by metal parts, which in turn affects the accuracy. Owing to the differential analysis, the output signal remains almost unchanged, even if the position of the positioning element deviates from the ideal axis of rotation. The distance between the sensor and the positioning element can be up to 5 mm, whereby the nominal distance is 1 mm.
