Functional principle

The dynamic inclinometers use an acceleration measuring cell and a gyroscope sensor to determine angles. Influences caused by vibrations or interfering acceleration are minimized by applying an intelligent fusion algorithm to the acceleration data and the rotation rate values. This enables the sensor to output a robust signal with impressive precision and speed, even in moving, dynamic applications.

The robust sensors are positioned with the cast side on a flat surface so that the casting

Programming instructions

Activation of the teach process

	Bridge between pin 5 and pin 1	**LED green**	**LED yellow**
Activate teaching	Before switching on the supply voltage, set the teach bridge, then switch on the voltage, then remove the bridge immediately after starting the sensor	Teach process active: 700 ms/100 ms	
The teach process is automatically deactivated after 30 s. The yellow CENTER LED and the green LED flash alternately and then return to normal operation.			

Teach sequence for center point, measuring range start and end

	Bridge between pin 5 and pin 1	**LED green**	**LED yellow**
Activate sequence*	Set bridge for 2…8 s	After 2 s of flashing at 1 Hz	
Set center point**	Bridge for 2…8 s		After 2 s of flashing at 1 Hz
Set start of measuring range**	Bridge for 8…14 s		After 8 s of flashing at 2 Hz
Set end of measuring range**	Bridge for 14…20 s		After 14 s of flashing at 4 Hz

Factory setting

	Bridge between pin 5 and pin 1	**LED green**	**LED yellow**
Activate sequence for factory settings*	Bridge for 8…14 s	After 2 s of flashing at 2 Hz	
Reset to factory settings**	Bridge for 2…8 s		After 2 s of flashing at 1 Hz

*Teach sequence remains active for 30 s, then returns to normal operation

**After the center point/measuring range/factory settings have been established, the teach sequence ends and automatically returns to the activated teach process
