Functional principle

Simple control tasks can be solved with the inductive linear position sensors of the WI series from Turck. They are selectively operated with a non-ferrous metal ring or blind hole and provide a distance proportional, analog output signal.

Use non-ferrous metals for ring or blind hole only. The diameter of the blind hole depends on its wall thickness and the material. Only the use of the NF-ring, which is included in the delivery, ensures that the values stated in the data sheet are observed. In case of non-observance or use of a blind hole, the measuring range may be reduced.
