Wiring diagram

Functional principle

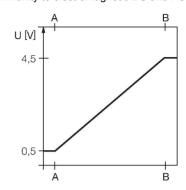

The measuring principle of linear position sensors is based on RLC coupling between the positioning element and the sensor, whereby an output signal is provided proportional to the position of the positioning element. The rugged sensors are wear and tear-free, thanks to the contactless operating principle. They convince through their excellent repeatability, resolution and linearity within a broad temperature range.

Mounting instructions

Mounting instructions/Description

Extensive mounting accessories provide various 5 options for installation. options for installation.

options for installation.

The positioning element can be mounted offset by 90°, thereby providing optimal mounting flexibility. The linear position sensor can also be riexibility. The linear position sensor can also be safely and easily mounted offset by 90° using the two versions of the provided fastening units. The measuring principle of RLC coupling makes the sensor immune to magnetized ferrous chips and other interference fields. It must be mounted without any space between the sensor and the mounting plate.

Status display via LED Green:
Sensor is supplied properly

Measuring range display via LED Green:
Positioning element is within the measuring range Green flashing:
Positioning element is within the measuring range, low signal quality (e.g. distance too great)

Off: safely and easily mounted offset by 90° using

Positioning element is outside the detection range

Teaching

The start and end point of the measuring range are set by pressing the button on the teach adapter. Moreover there is the possibility of inverting the course of the output curve. Bridge pin 5 and pin 1 for 10 s (UB) = factory

Bridge pin 5 and pin 3 for 10 s (GND) = factory setting inverted

Bridge pin 5 and pin 3 for 2 s (GND) = sets start value of measuring range Bridge pin 5 and pin 1 for 2 s (UB) = sets end value of measuring range
