Wiring diagram

Functional principle

Inductive sensors are designed for wear-free and contactless detection of metal objects. uprox Factor 1 sensors have significant advantages due to their patented ferrite-coreless multi-coil system. They detect all metals at the same large switching distance and are resistant to magnetic fields.

Mounting instructions

Mounting instructions/Description

The image contains three technical diagrams illustrating the mounting of a sensor. The top diagram is a side view of a square sensor with a central circular active area (highlighted in yellow) and a threaded mounting post. A dimension line labeled 'T' indicates the thickness of the sensor. The middle diagram shows two such sensors mounted on a rectangular plate. A dimension line labeled 'G' indicates the distance between the centers of the two sensors. The bottom diagram is a top view of two sensors mounted on a plate. It shows two yellow circular active areas. Dimension 'D' is the distance between the centers of the two active areas. Dimension 'S' is the distance from the center of an active area to the edge of the sensor. Dimension 'W' is the width of the mounting plate.

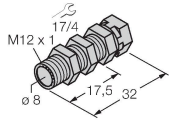

Distance D	2 x B
Distance W	3 x Sn
Distance T	3 x B
Distance S	1.5 x B
