Wiring diagram

Functional principle

Inductive sensors detect metal objects contactless and wear-free. For this, they use a high-frequency electromagnetic AC field that interacts with the target. Inductive sensors generate this field via an RLC circuit with a ferrite coil.

Mounting instructions

Mounting instructions/Description

The image contains three technical diagrams illustrating the mounting of a sensor. The top diagram shows a side view of a sensor mounted on a plate, with dimension T indicating the distance from the sensor's center to the edge of the plate. The middle diagram shows a top view of two sensors mounted on a plate, with dimension G indicating the distance between the centers of the two sensors. The bottom diagram shows a perspective view of a sensor mounted on a plate, with dimensions N, S, D, and W indicating various mounting parameters: N is the distance from the sensor's center to the edge of the plate, S is the distance from the sensor's center to the edge of the plate, D is the distance from the sensor's center to the edge of the plate, and W is the distance from the sensor's center to the edge of the plate.

Distance D	3 x B
Distance W	3 x Sn
Distance T	3 x B
Distance S	1.5 x B
Distance G	6 x Sn
Distance N	2 x Sn
