Isolating transducer
1-channel
IMX12-AI01-1I-2IU-HPR/24VDC

The 1-channel IMX12-AI01-1I-2IU-HPR/24VDC HART® isolating transducer with splitter function is designed to operate intrinsically safe HART® 2-wire transducers in the Ex zone and to transmit the measured signals to the non-Ex zone. In addition to the analog signals, the device also transmits the digital HART® communication signals bidirectionally. The HART® signals are only transmitted to output [A1]. Furthermore, active and passive 2-wire HART® transmitters can be operated. Connection is via removable screw terminals. The device can be powered from a power bridge that also transmits a collective fault signal.

The device is equipped with an input circuit of 4…20 mA and an output circuit of 4…20 mA (either as source or sink) or 1…5 V (source). The input signals are transmitted 1:1 without interference in the range of 3.8…20.5 mA and made available at the outputs in the non-Ex area. Wire-break (< 3.5 mA) and short-circuit (> 22 mA) in the transducer circuit are output as current < 3.5 mA or voltage < 0.875 V. The device can be powered from a power bridge that also transmits a collective fault signal.

A green LED indicates operational readiness. An error in the input circuit leads to a flashing red LED according to NE44.

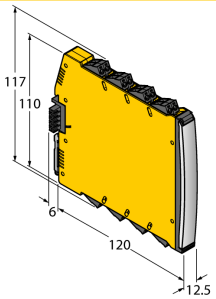

The device can be used in safety circuits up to SIL2 (high and low demand according to IEC 61508) and meets the requirements of the NE21.

The device is equipped with removable screw terminals.
