

July 2023

Subject: PFAS chemicals, including but not limited to perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS).

According to the current definition, the substance group of PFAS comprises more than 10,000 different substances. Turck actively follows the course of the EU's restriction process and is aware of the importance for its products.

Due to the scope of the regulatory proposal and the current data situation regarding PFAS, we cannot declare an exclusion of the potentially affected substances in general.

PFAS may be present in components and parts we install, e.g. cable sheathing, sealings and plastic housings, but PFAS are not knowingly added into our products within our production process. We are in close communication with our supply chain to assess the concern for our products.

Best Regards,
